

Pick-A-Point "ICON"

BBV are proud to have been chosen as the supplier of an integrated security control solution for East Ayresshire Council's new control room.

The project has taken three years from conception to completion and has involved the building of a completely new facility.

The concept:

The design concept called for a one stop solution that would bring together the monitoring of their fire and intruder detection systems, the monitoring and management of a large number of CCTV cameras from both public and private space, and management of the digital video recording system.

A management audit trail, with the ability to search for and download images for evidential purposes and a network health check were also an integral part of the specification.

The solution:

Based on considerable past experience BBV's technical team were able to provide a cost effective and importantly a simple to use system based on a combination of BBV Pick-A-Point workstations, a BBV FBM Matrix and a DM digital recording solution.

Pick-A-Point allows seamless integration of both analogue and IP image sources and provides the opportunity to expand the system utilising products from a wide range of manufacturers.

As a direct result of the design work on this project BBV were able to launch the latest release of Pick-A-Point under the Pick-A-Point "ICON" branding.

Pick-A-Point ICON is currently being commissioned for Redcar and Cleveland Council and is managing images from both fibre and a wireless area network.

The result

Further information will be available on completion of this project.
